Duration	4 mins 59 secs
Grade	**14.00** out of 15.00 (**93.33**%)

Question **1**

Correct

Mark 1.00 out of 1.00

Which of the following is a conventional searching technique?

a. Hashing
b. Linear search ✓
c. Binary search
d. Dynamic search

Question **2**

Correct

Mark 1.00 out of 1.00

Which of the following is a type of searching method?

a. Quick search
b. Bubble search
c. Linear search ✓
d. Merge search

Question **3**

Correct

Mark 1.00 out of 1.00

What is searching in the context of computer science?

a. Determining whether an element is present in a list ✓
b. Sorting elements in a list
c. Deleting elements from a list
d. Inserting elements into a list

Question **4**

Correct

Mark 1.00 out of 1.00

Which of the following best describes the process of a linear search?

- a. Dividing the list in half repeatedly
- b. Checking each element sequentially ✓
- c. Sorting the list before searching
- d. Skipping every second element

Question **5**

Incorrect

Mark 0.00 out of 1.00

What happens in a binary search if the list has an even number of elements?

- a. The search stops
- b. The lower middle element is chosen as the middle element ✗
- c. The middle element is chosen randomly
- d. The higher middle element is chosen as the middle element

Question **6**

Correct

Mark 1.00 out of 1.00

During a linear search, what is the maximum number of comparisons needed to find an element in a list of size n?

- a. n-1
- b. log n
- c. n ✓
- d. n/2

Question **7**

Correct

Mark 1.00 out of 1.00

_____sort is the simplest sorting algorithm that works by repeatedly swapping the adjacent elements in case they are unordered in n-1 passes.

- a. Complexity
- b. Insertion
- c. Bubble ✓
- d. Selection

Question **8**

Correct

Mark 1.00 out of 1.00

During a binary search, what happens if the target element matches the middle element?

a. The search ends successfully ✓
b. The search continues in the left sublist
c. The list is sorted
d. The search continues in the right sublist

Question **9**

Correct

Mark 1.00 out of 1.00

Which of the following is not a limitation of binary search algorithm?

a. Requirement of sorted array is expensive when a lot of insertion and deletions are needed
b. Binary search algorithm is not efficient when the data elements more than 1500 ✓
c. There must be a mechanism to access middle element directly
d. Must use a sorted array

Question **10**

Correct

Mark 1.00 out of 1.00

In the context of searching, what is a successful search?

a. When the list contains duplicate elements
b. When the list is sorted
c. When the element is found in the list ✓
d. When the search algorithm finishes

Question **11**

Correct

Mark 1.00 out of 1.00

What happens when the element is found in linear search?

a. The search continues until the end of the list
b. The search starts over from the beginning
c. The search backtracks to find duplicate elements
d. The search stops immediately ✓

Question **12**

Correct

Mark 1.00 out of 1.00

In binary search, how is the middle element determined?

- a. By dividing the list length by two ✓
- b. By starting from the first element
- c. By comparing each element sequentially
- d. By using a hash function

Question **13**

Correct

Mark 1.00 out of 1.00

In binary search, what happens if the middle element does not match the target element?

- a. The list is sorted
- b. The search continues from the beginning
- c. The search continues in the left or right sublist ✓
- d. The search stops

Question **14**

Correct

Mark 1.00 out of 1.00

In _____ checks the elements of a list, one at a time, without skipping any element.

- a. Hash search
- b. Binary search
- c. Both (1) & (3)
- d. Linear search ✓

Question **15**

Correct

Mark 1.00 out of 1.00

_____ search takes a sorted/ordered list and divides it in the middle.

- a. Linear
- b. Both (1) & (3)
- c. Binary ✓
- d. Hash
